When ordering two processors, the second processor must be the same as the first. Intel processor numbers are not a measurement of higher performance. Processor numbers differentiate features within each processor family, not across different processor families. **NOTE 1:** When ordering two processors, the second processor must be the same as the first. Intel processor numbers are not a measurement of higher performance. Processor numbers differentiate features within each processor family, not across different processor families. See: <a href="http://www.intel.com/products/processor">http://www.intel.com/products/processor</a> number/ for details.

Multi-Core technologies are designed to improve performance of multithreaded software products and hardware-aware multitasking operating systems and may require appropriate operating system software for full benefits; check with software provider to determine suitability; Not all customers or software applications will necessarily benefit from use of these technologies.

64-bit computing on Intel®64 architecture requires a computer system with a processor, chipset, BIOS, operating system, device drivers, and applications enabled for Intel®64 architecture. Processor will not operate (including 32-bit operation) without an Intel®64 architecture-enabled BIOS. Performance will vary depending on your hardware and software configurations. See: <a href="http://www.intel.com/info/em64">http://www.intel.com/info/em64</a>t for more information.

Intel's numbering is not a measurement of higher performance.

Z620 processor AMO kits include:

<sup>\*</sup> Each drive requires a PCle x4 (minimum) slot to be available. Full performance is obtained only when using PCle slots connected to the CPU. Non-CPU PCle slots may see a decrease of up to 10%. Please see slot configuration recommendations at www.hp.com/go/zturbo. Note that graphics cards, Thunderbolt™, and other devices will require PCle slots.

For hard drives, 1 GB = 1 billion bytes; TB = 1 trillion bytes. Actual formatted capacity is less. Up to 12 GB of hard drive (or system disk) is reserved for the system recovery software (XP and XP Pro). Up to 3 GB of system disk is reserved for system recovery software (Vista). Up to 4 drives are allowed. The 4th drive will occupy one of the external 5.25" bays.

	Key features and benefits HP Vision Diagnostics simplifies the process of effectively identifying, diagnosing, and isolating the hardware issues. In addition to robust management tools, service tools can be invaluable in quickly resolving system problems. To streamline the service process and resolve problems quickly, it is necessary to have the right information available at the time that a service call is placed. The primary information requirement, which is also the one that provides the greatest Vision into potential system issues, is the configuration of the system. Vision diagnostics helps provide higher system availability. Typical uses of the Vision Diagnostics are:  • Testing and diagnosing apparent hardware failures • Documenting system configurations for upgrade planning, standardization, inventory tracking, disaster recovery, and maintenance • Sending configuration information to another location for more in-depth analysis

Processors Intel®Xeon®Processor E5-2620 6C 2.00GHz

Intel®Xeon®Processor E5-2643 4C 3.30GHz

#### Introduction

The Intel®Xeon®processor E5-1600/E5-2600/E5-4600 product families are the next generation of 64-bit, multi-core enterprise processors built on 32-nanometer process technology. Throughout this document, the Intel®Xeon®processor E5-1600/E5-2600/E5-4600 product families may be referred to as simply the processor. Where information differs between the EP and EP 4S SKUs, this document uses specific Intel®Xeon®processor E5-1600 product family, Intel®Xeon® processor E5-2600 product family, and Intel®Xeon®processor E5-4600 product family notation.Based on the low-power/high performance 2nd Generation Intel®Core™Processor Family microarchitecture, the processor is designed for a two chip platform consisting of a processor and a Platform Controller Hub (PCH) enabling higher performance, easier validation, and improved x-y footprint. The Intel®Xeon®processor E5-1600 product family and the Intel®Xeon® processor E5-2600 product family are designed for Efficient Performance server, workstation and HPC platforms. The Intel®Xeon®processor E5-4600 product family processor supports scalable server and HPC platforms of two or more processors, including "glueless" 4-way platforms. Note: some processor features are not available on all platforms. These processors feature per socket, two Intel®QuickPath Interconnect point-to-point links capable of up to 8.0 GT/s, up to 40 lanes of PCI Express\* 3.0 links capable of 8.0 GT/s, and 4 lanes of DMI2/PCI Express\* 2.0 interface with a peak transfer rate of 5.0 GT/s. The processor supports up to 46 bits of physical address space and 48-bit of virtual address space.

Included in this family of processors is an integrated memory controller (IMC) and integrated I/O (IIO) (such as PCI Express\* and DMI2) on a single silicon die. This single die solution is known as a monolithic processor.

### **Performance and Features**

- Up to 8 execution cores
- Each core supports two threads (Intel®Hyper-Threading Technology), up to 16 threads per socket
- 46-bit physical addressing and 48-bit virtual addressing
- 1 GB large page support for server applications
- A 32-KB instruction and 32-KB data first-level cache (L1) for each core
- A 256-KB shared instruction/data mid-level (L2) cache for each core
- Up to 20 MB last level cache (LLC): up

Tesla K40 GPU Boost By default the Tesla K40 active ships with the core clock set to the base

clock. HPC workloads can have one or more characteristics as described. When selecting one of the supported boost clocks a good strategy is to characterize the workload with the available boost clocks. For example, DGEMM/Linpack are extremely demanding on power. Therefore, the "base clock" may be the correct choice when running Linpack. Some workloads in life sciences, manufacturing, CFD, CAD, etc., may have power headroom and can take advantage of one of the

boost clocks.
